

KAUSHIKAN DINAKARAN

Denton, TX | +1(940)594-2407 | kaushikandinakaran@gmail.com | [linkedin.com/in/kaushikan-d-526a47205](https://www.linkedin.com/in/kaushikan-d-526a47205)

PROFESSIONAL SUMMARY

Data Engineer and Analyst with strong expertise in scalable ETL pipelines and cloud-native platforms. Successfully automated data ingestion and developed dashboards using Power BI and Looker Studio. Integrated LLMs into workflows for enhanced reporting. Eager to leverage data engineering and analytics skills to drive impactful insights as a Data Scientist.

EDUCATION

University of North Texas

Master, Data Science

Jan 2024 - Dec 2025

Denton, TX

• **GPA:** 4/4

• **Coursework:** Principles and Techniques for Data Science, Applied Machine Learning for Data Scientists, Data Visualization and Communication, Introduction to Health Data Analytics

SRM University

Bachelor of Technology, Computer Science

2018 - 2022

SKILLS

- **Programming Languages:** Python, SQL, JavaScript
- **Databases & Data Warehousing:** MySQL, PostgreSQL, Snowflake, BigQuery, AWS RDS, AWS Athena
- **Data Engineering & ETL:** Apache Airflow, Talend, Apache Kafka, ETL Pipelines, Data Warehousing, Data Cleaning & Transformation
- **Cloud Platforms:** AWS (Lambda, S3, RDS, Athena, SQS), Google Cloud (GCF, BigQuery)
- **Machine Learning & AI:** TensorFlow, scikit-learn, Natural Language Processing (NLP), LLM Integration (LangChain)
- **Frameworks & Libraries:** Django, Flask, FastAPI, Celery, Pandas, NumPy
- **Data Visualization:** Power BI, Looker Studio, Tableau
- **Big Data & Distributed Systems:** Apache Spark, Hadoop
- **DevOps & Tools:** Docker, Git, Linux, Jupyter Notebook
- **Soft Skills:** Collaboration, Team Leadership, Problem Solving, Analytical Thinking

EXPERIENCE

Think Future Technologies

Software Engineer L1

Jan 2022 - Dec 2023

Gurgaon, India

- Developed machine learning models for face recognition, object recognition, and OCR, enhancing model accuracy through experimentation and optimization techniques. Designed secure and scalable APIs for integrating these models into production systems, improving system efficiency
- Developed scalable ETL pipelines using Python, SQL, and Apache Kafka for streaming data, transforming and loading data into target databases, which improved data processing efficiency. Designed interactive data visualizations using Power BI for clear and compelling analysis, enhancing decision-making
- Designed and deployed web applications using Django framework, implementing efficient task scheduling with Celery and Redis. Debugged and optimized backend processes to ensure seamless user experience and improved performance, resulting in increased user satisfaction
- Built attendance tracking and progress reporting systems, integrating QA processes throughout the development lifecycle to improve overall software performance and reliability. Implemented metrics for evaluating QA workflows, leading to enhanced software reliability and user trust
- Contributed to various projects including Robotic Process Automation (RPA) using JavaScript and D3.js, moBerries (PostgreSQL database design and Google Data Studio dashboards), and a streaming data pipeline using Apache Kafka and Python during an internship period, enhancing project outcomes and efficiency

Think Future Technologies

data engineer consultant

Jan 2024 - Present

Gurgaon, India

- Designed and implemented end-to-end data pipelines to extract DSR (Daily Status Report) data from emails and automate ingestion into AWS Cloud Storage and Data Warehouse environments.
- Built an interactive dashboard for visualizing employee activity reports and operational metrics, improving reporting efficiency across departments.
- Developed an LLM-based DSR summarizer that generates intelligent summaries of employee work logs for selected date ranges, leveraging OpenAI APIs and Python-based NLP pipelines.
- Engineered data cleaning and transformation workflows to process client data and load it into centralized Data Warehouse systems, ensuring high data quality and consistency.
- Created and scheduled Talend ETL jobs to extract data from multiple sources and load it into staging and production tables, implementing incremental load strategies to optimize performance.

- Resolved critical issues in existing data pipelines, improving system reliability and job success rate.
- Consolidated multiple Airflow DAG processors into a single dynamic Lambda function, reducing maintenance overhead and execution complexity.
- Migrated AWS Lambda pipelines to Google Cloud Functions (GCF) for improved scalability, cost efficiency, and multi-cloud integration.

PROJECTS

A Comparative Analysis of Respiratory Disease Concentrating on Asthma and Influenza

<https://docs.google.com/document/u/1/d/e/2PACX-1vSKeyFxXf3xloINUBPL1PekGEo5cSLsQYDYZk2wnIQPPIwerDQpij-mU6eRCSTGK8Q/pub>

- Analyzed asthma and influenza trends using MEPS data, focusing on demographics, healthcare costs, and medical appointments
- Conducted statistical tests (Chi-Square, Mann-Whitney) to identify significant differences
- Derived insights for improved resource distribution and healthcare strategies
- Presented findings via data visualizations and key recommendations

Empowering Industrial Insights: A Conceptual Model for Knowledge Management Systems

https://docs.google.com/document/u/1/d/e/2PACX-1vSGdjzV9sH48FjZrqDHnBiH_lTm8AimwJfwpOjsGTfaJKDm-cbo0PzpB5l3MFuaUNg/pub

- Developed a conceptual knowledge management strategy for the manufacturing/construction industry, integrating IoT sensors, Oracle Databases, and AWS services (including QuickSight for performance tracking and Apache NiFi for data governance) to facilitate knowledge discovery, retention, governance, and analytics application
- Enabling improved operations, productivity, and innovation

Temperature Prediction by Machine Learning

- Developed a temperature monitoring and prediction system using an LM35 sensor, Bolt Cloud, and machine learning algorithms to track and predict temperature in pharmaceutical manufacturing environments
- Including system architecture design, programming, hardware setup, cloud connectivity, and data collection

PathoVision

- Developed an automated machine learning system using ResNet-50/101, Inception, and EfficientNet models to classify COVID-19, pneumonia, and normal chest X-rays
- Implemented data preprocessing and augmentation techniques
- Integrated a Django-based web platform for symptom surveys and appointment booking

CERTIFICATIONS

- Learning Data Analytics
- Python for Data Science and AI
- HackerRank SQL
